DSA	●●●●○	Html	●●●●○
Css	●●●●○	Javascript	●●●●○
ReactJS	●●○○○		

Projects

Portfolio, Using Html , Css, Javascript

Created my portfolio, It is kind of my resume here I mentioned all my skills, and projects. Learned to create different divisions and effects like hovering and creating classes, buttons, integrating links and different pages to its parent page

JavaScript Calculator

We will use simple HTML, CSS, and make all the components work using basic JavaScript functions. To display buttons and numbers, we will use HTML, and add some beautification to them using CSS. To make the buttons perform the respective functions we will use JavaScript.

A Reminder App

This is a good project for beginners. A Reminder App can help you set reminders for different events that you have throughout the day. It'll help you stay updated with all your tasks for the day. It can be useful for all those who are not so good at organizing their plans and forget easily. This would be a simple application just whose task would be just to remind you of something at a particular time

Movie Recommender

This project will fascinate many. We all love recommendations of movies or series to binge-watch. To execute this project, the inputs of the viewers who saw the movie first will be collected, and then their responses will be classified. The R programming language can be used to create this movie-recommender system.
